Artificial Intelligence and Machine Learning

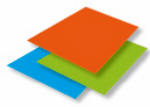

Turning Information into Knowledge

Artificial Intelligence

... die Euphorie

ITRESELLER

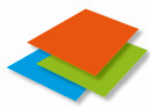

Künstliche Intelligenz Teil jeder Software bis 2020

von Simon Wegmüller, 19. Juli 2017

Markt-Euphorie und zunehmendes Interesse an künstlicher Intelligenz sorgen immer mehr dafür, dass Software-Verkäufer die Technologie in ihre Produktstrategien einbinden.

Die Marktanalysten von Gartner sind der Ansicht, dass

- ♦ **bis 2020 AI-Technologie Teil von fast allen Software-Produkte sein wird**
- ♦ **AI bis dahin zu den Top fünf Investment-Prioritäten für mehr als 30 Prozent der CIOs gehören wird.**

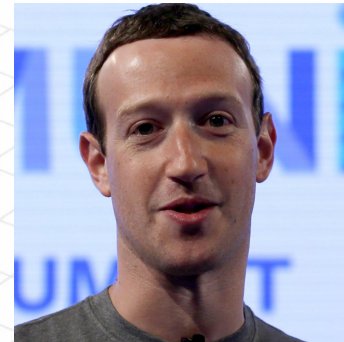

... die Ernüchterung

Maschinelle Intelligenz wird massiv überschätzt

von Heinz Scheuring, NZZaS 19.08.2017

Die Warnung, dass Maschinen schon bald dem Menschen überlegen sind und ihn versklaven werden, ist unverantwortlich und absurd.

Die Fortschrittsideologen des Silicon Valley haben plötzlich Angst: Wie Zauberlehrlinge fürchten sie sich vor den angeblichen Errungenschaften der künstlichen Intelligenz (KI).

The Company:

15 Years Experience in Semantic Technologies

Swiss Software Company

Sector: ICT

Founded: 2002

Competences: Sem. Tech.

Headquarter: Buchs SG

Employees: 8

Originated from:

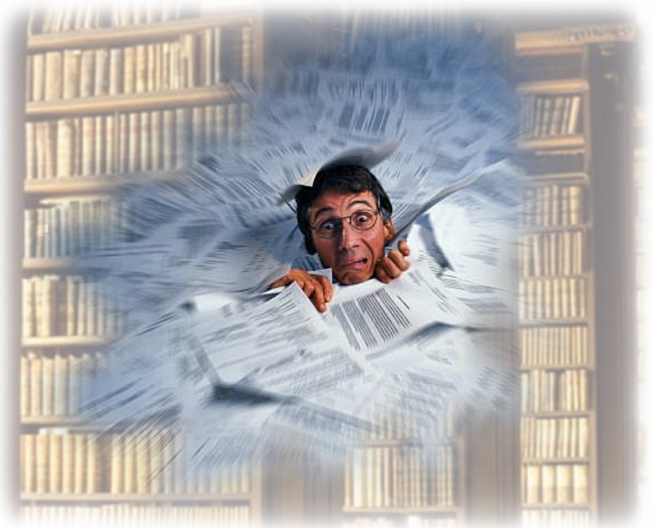

MSI Dr. Wälti AG founded 1981
with core competences in high
performance databases (Widas)
and data analysis (Big Data)

Today's Information Management Problem

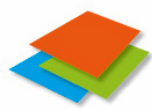

How can we manage the flood of information?

- **Electronically stored data** growth 50 to 100% per year, i.e., **doubling every 1 to 2 years**
(International Data Corporation IDC, November 2010)
- **85%** of the electronically stored corporate information is **unstructured information**
(IBM study, August 2005)

With its USPs, InfoCodex can handle this problem

- InfoCodex “*understands*” the thematic content, across the language barriers, without training
- It can *categorize/match* documents according to their content (building well organized bookshelves)
- It automatically generates *abstracts* and *keywords*
- It *bundles similar documents* into one family reduction of volume without loss of information
- It finds and retrieves documents not only by keywords, but also using *text in natural language*

Demo Example Illustrating InfoCodex' USPs

Taking On Wall Street s Church of Big Money - The New York Times

Taking On Wall Street s Church of Big Money - The New York Times. ... Over the course of four years, he produced a well-reviewed novel, American Dervish, a comic retelling of his own childhood, narrated by a boy from a secular Muslim household who turns deeply religious. ... An idealistic journalist in the story sets out to torpedo every piety of this new faux-religion of finance but edges too close and is compromised and subsumed. ... Akhtar in 2014, when the playhouse staged The Who & the What, his play about a young woman who undertakes a novel on women and Islam, to the consternation of her father. ... Akhtar s zeal for Islam, to an extent, took him out of his parents sphere. ... One of its most sympathetic characters is a Jewish doctor who falls into an ill-fated relationship with the young Muslim narrator s aunt.

Solution by InfoCodex: Semantics + Neural Networks + Statistical Analysis

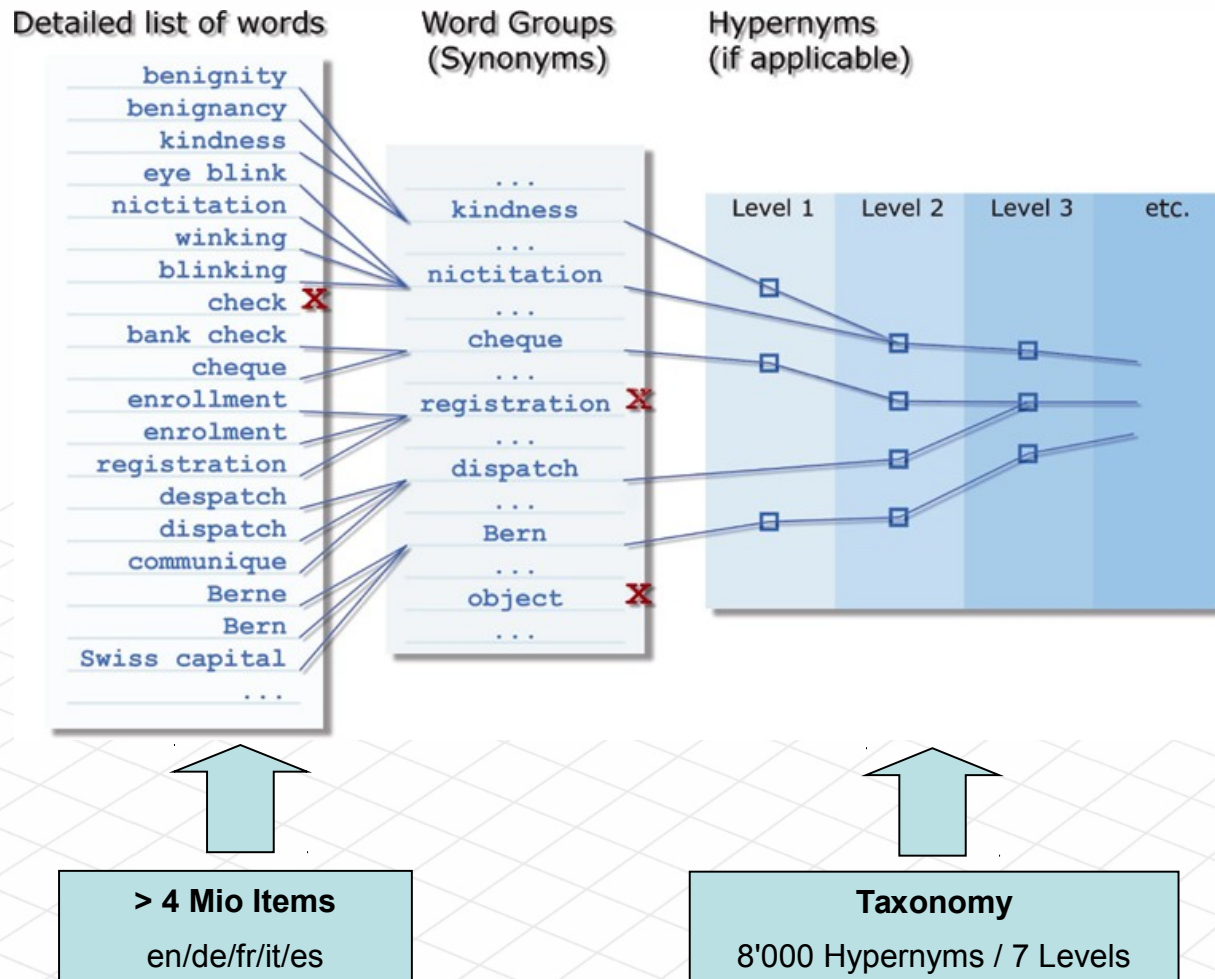

The essential features

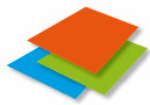

- Unique, large Linguistic Database linked to a universal Taxonomy (4 Mio items, en/de/fr/it/es)
- Combined with linguistic and statistical analyses and neural networks
- Patented in the EU and the USA

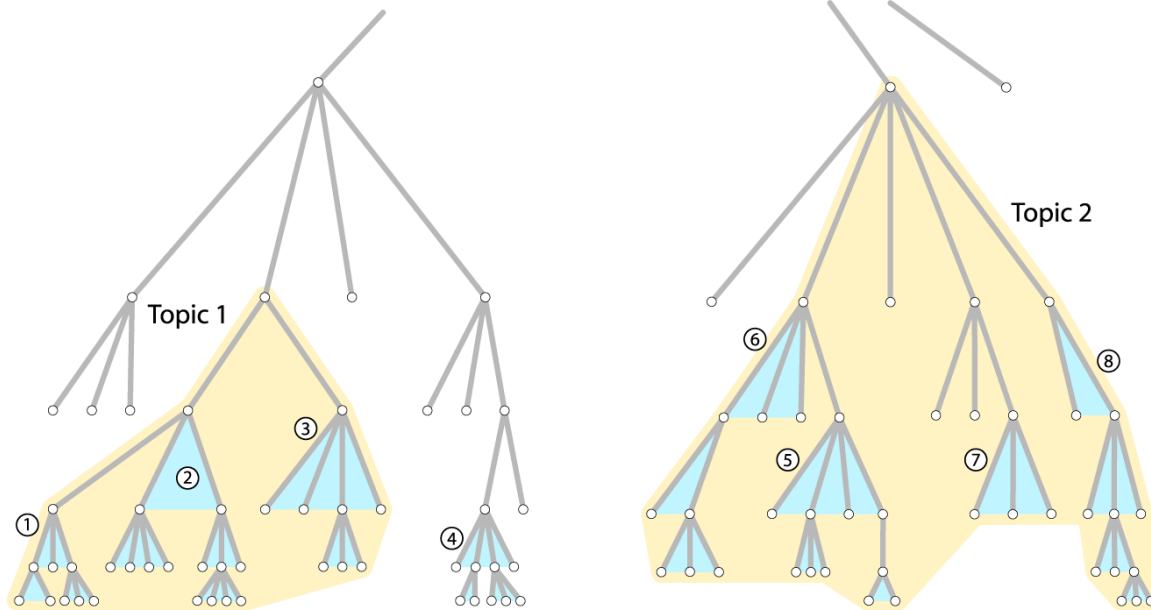

Basis for the Semantic Analysis: Linguistic Database

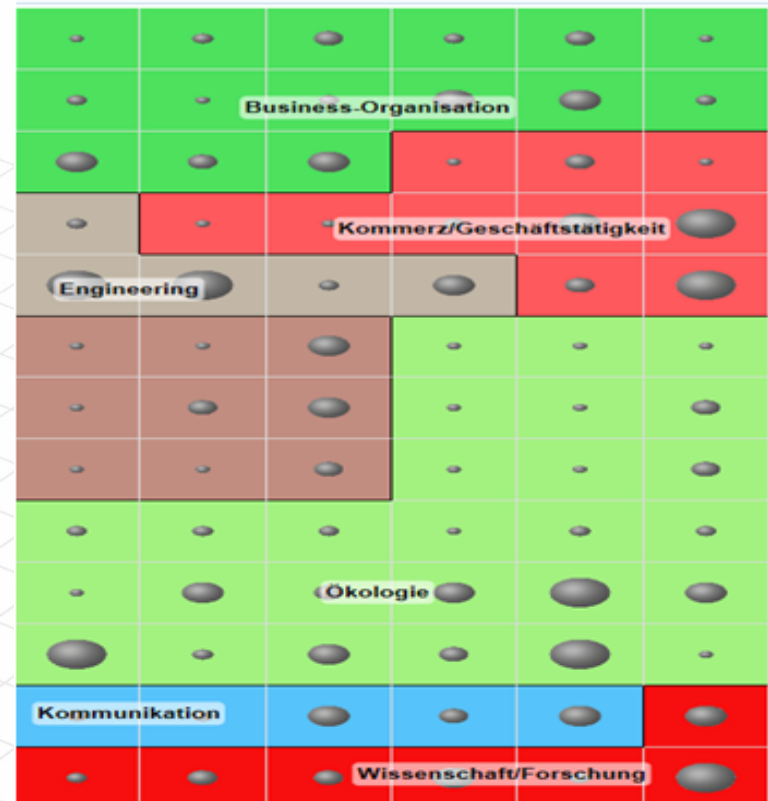

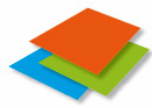

Clustering of Documents

Combining Agglomeration Clusters into Thematic Topics

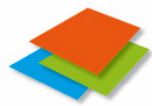

InfoCodex
Semantic Technologies

This is what the Tool Should Do

Automatically read and analyze big amounts of unstructured (incl. structured) information, condense and summarize (“pre-digestion”)

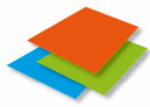

InfoCodex
Semantic Technologies

Competitors

There are many competitors claiming similar functionalities. However:

- Do they cover the whole spectrum necessary to “predigest” masses of unstructured information?
- Many claim to handle lots of languages. But do they really recognize that the English translation and the Spanish original document have the same content?
- Can they categorize documents according to their thematic content without human intervention, i.e. without a costly training with large pattern collection?

The Ants as Role Model

Collective Intelligence. See also Bryan Walsh, TIME, May 27, 2014:
Your Ant Farm is Smarter Than Google

Key-Applications

1. Market Intelligence

Partners Group, Hitachi HZI, Evatec, Mibelle

2. Knowledge Discovery

Merck & Co., USA

3. Profile Matching

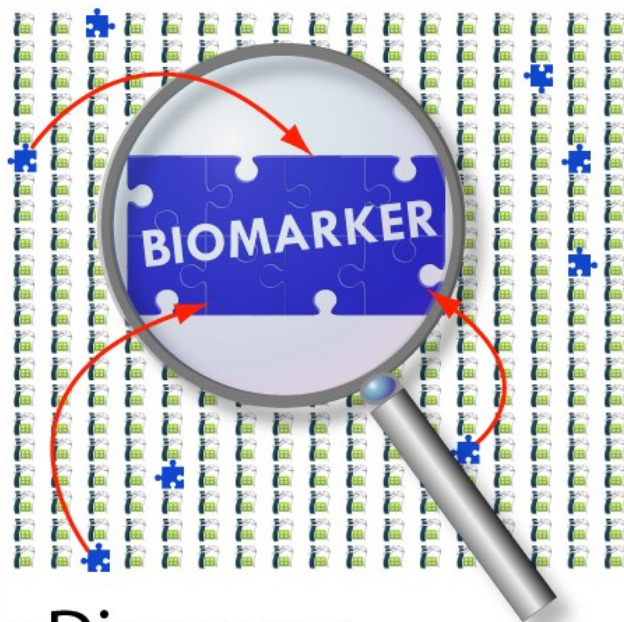

Remintrex (Berlin), ProzessPiraten Labs (Ulm)

4. Enterprise Information Management

Agroscope, Mibelle, Hitachi HZI, Evatec

Knowledge Discovery: Experiment of Merck with InfoCodex

eDiscovery

The objective:

- ▶ Test pure machine intelligence for “semantic” drug research

The tasks:

- ▶ Discover novel biomarkers for diabetes and obesity (D&O) by analyzing 120'000 medical publications (PubMed etc.)
- ▶ Blind experiment, no human feedback

Biomarker: \$ 13.6 billion market in 2011, growing to \$ 25 billion by 2016

Enterprise Information Management

- **Knowledge Centers:** Overview of large quantities of heterogeneous documents and easy access to dispersed information
- **Corporate information management:** e.g. handling of decision-relevant short-term information
- **Secure the relevant company knowledge:** Knowledge transfer, reduce dependence on individual persons
