

Evaluation Decision by Agroscope/ Federal Office for IT Strategy

We are happy to inform you of the following decision:

The Swiss Agricultural Research Institutes (Agroscope) have conducted a comprehensive evaluation of knowledge management tools over the last one and a half years. This evaluation was financed by the Federal Office for IT Strategy (ISB Informatikstrategieorgan Bund).

Starting out from a long list of around 20 knowledge management systems, two products remained for the extensive practical tests, which have been performed by two seven-man evaluation teams from the research institutes of Agroscope FAL Reckenholz and Agroscope FAW Wädenswil during the first six months of 2005.

Especially tested were the functionality and the scope of the added value that can be attained with knowledge management tools. A great emphasis was placed on the reliable protection from unauthorized access to confidential documents over a complex network environment. Further aspects were the docking onto the central user administration (ADS in the case at hand) and above all, the demand for minimal organizational effort for the implementation and operation of a knowledge management system.

The decision has now fallen in favour of InfoCodex, and Agroscope has ordered the system on 31st October 2005. This decision is especially of importance to us because it rests on a broad-based, comprehensive and competent evaluation.

Buchs, 11th November 2005
